

For applications for which a large stroke is required but only little installation space is available, HAHN telescopic gas springs are the optimum solution.

- ▶ As one of the first manufacturers worldwide, HAHN Gasfedern made the telescope principle in the construction and manufacturing of gas springs marketable. The patent-protected telescopic gas springs consist of several cylinders that are built into each other. As a standard from our modular system, we manufacture the series T-06-15-40 and T-10-28-65. Please send us the data from your application and we will calculate the suitable telescopic gas spring.
